We claim:

- 1. A method for controlling autonomic nerve stimulation of the gastrointestinal tract comprising the steps of:
- a. selecting from a storage area one or more waveforms generated in the body and carried by neurons in the body;
- b. transmitting or conducting the selected waveforms to a treatment member in contact with the body; and
- c. broadcasting the selected waveforms from the treatment member to an organ in the body.
- 2. The method according to claim 1, in which step "a" further includes selecting said waveforms from a storage area in a computer.
- 3. The method according to claim 1, in which step "b" further comprises transmitting the selected waveforms remotely to the treatment member.
- 4. The method according to claim 1, in which step "b" further comprises transmission of the selected waveforms.
- 5. An apparatus for controlling autonomic nerve stimulation of the gastrointestinal tract, comprising:
 - a. a source of collected waveforms indicative of body organ functioning;
 - b. a treatment member in direct contact with the body;

- c. means for transmitting one or more of the collected waveforms to the treatment member; and
- d. means for broadcasting the collected waveforms from the treatment member to a body organ to stimulate organ function.
- 6. The apparatus according to claim 5, in which said transmitting means includes a digital to analog converter.
- 7. The apparatus according to claim 5, in which said source comprises a computer having collected waveforms stored in digital format.
- 8. The apparatus according to claim 7, in which said computer includes separate storage areas for collecting waveforms of different respiratory functional categories.
- 9. The apparatus according to claim 5, in which the treatment member comprises an antenna for broadcasting respiratory signals.
- 10. The apparatus according to claim 5, in which the treatment member comprises an electrode.
